

Project Name: AI-Powered Virtual Assistant

Objective: Build a Chatbot tailored for the HR domain using NLP techniques and potentially transformer-based models.

Skills/Technologies Involved:

- Python
- Rasa or Dialog Flow
- Hugging Face Transformers
- Web integration [This part will be taken care by our UI team in the office]

Project Impact:

This assistant will help automate routine HR queries and has the potential to be enhanced with voice or image input capabilities in future phases.

Suggested Approach:

To get started, please review the following resources. Based on your understanding, identify and suggest a specific HR functionality (e.g., leave application, employee onboarding, policy FAQs, etc.) that we can implement in this project:
